Work Flow System (WFS)

What is Work Flow System?

Originally, the Work Flow System was designed with a very specific purpose: to support the Online Request Expense Management System. In this context, it functioned as a dedicated tool for Approvers and Managers to evaluate and approve expense-related requests. Its scope was narrow, focusing only on expense monitoring and approval, which made it effective but limited in flexibility.

However, as the company expanded and began developing systems that required approval mechanisms—such as FMS, IMP, VBS, Gate Pass and other internal transactions—the limitations of having separate approval processes for each system became evident. Managing approvals across different platforms led to inefficiencies, inconsistencies in decision-making, and increased administrative overhead.

The evolution of the Work Flow System is a direct response to the company's growing operational complexity and the need for more efficient, scalable approval processes. To address these challenges, the Work Flow System evolved from a single-purpose tool into a centralized, reusable approval platform. Instead of being tightly coupled with the Expense Management System, it was redesigned to support a wide range of approval workflows across various business systems.

Log-in to the System

Your username and password would be your Philsaga domain account provided by the ICT Department.

- Fill-in the required fields
- Click Sign In to access the System

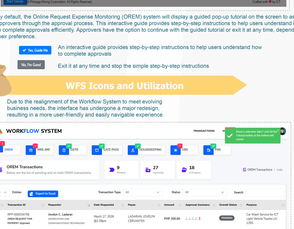

Request Lists (For your Approval)

After logging in, you'll see a list of your pending requests for review and approval. References are provided below.

There are diffent tabs where there are different system names. Tab with indicated number tells that there are transactions awaiting for approval.

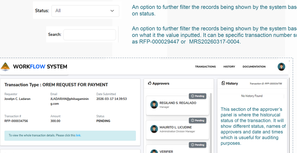

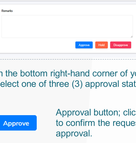

By default, the Online Request Expense Monitoring (OREM) system will display a guided pop-up tutorial on the screen to assist approvers through the approval process. This interactive guide provides step-by-step instructions to help users understand how to complete approvals efficiently. Approvers have the option to continue with the guided tutorial or exit it at any time, depending on their preference.

WFS Icons and Utilization

Due to the realignment of the Workflow System to meet evolving business needs, the interface has undergone a major redesign, resulting in a more user-friendly and easily navigable experience.

Pending – Total number of transactions for approval.
Upcoming – Total number of transactions created from different systems but not yet submitted for approval.
In Progress – Total number of transactions that have been approved but are not yet fully approved due to series of approval.

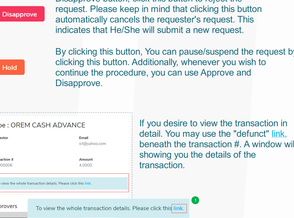

An option to choose how may record to be shown.

An option to Export to Excel all records being shown by the system.

An option to further filter the records being shown by the system based on system transactions.

An option to further filter the records being shown by the system based on status.

An option to further filter the records being shown by the system based on what it the value inputted. It can be specific transaction number such as RFP-000029447 or MRS2026037-0004.

In the bottom right-hand corner of your approving interface, you can select one of three (3) approval statuses for the specified transaction.

Approve

Approval button; click this button to confirm the request's approval.

Disapprove

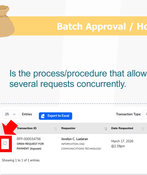

Disapprove button; click this button to reject the request. Please keep in mind that clicking this button automatically cancels the requester's request. This indicates that He/She will submit a new request.

Hold

By clicking this button, You can pause/suspend the request by clicking this button. Additionally, whenever you wish to continue the procedure, you can use Approve and Disapprove.

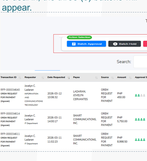

If you desire to view the transaction in detail. You may use the "defunct" link. beneath the transaction #. A window will showing you the details of the transaction.
